(54) LITERARY WORKS TRANSMISSION SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To prevent the surreptitious use of information, the wrong copying, etc., and to properly charge for the use of the literary works by dividing the information on literary works into a reproduction program and the literary work data reproduced via execution of the reproduction program and thus generating and transmitting the unified transmission information that cannot be simply separated.

SOLUTION: A literary works management device 1 connected to a network 100 via a connection device 102 divides the information on literary works into a reproduction program and the literary work data which reproduces the literary work by executing the reproduction program and stores them in an external storage 7. A scramble processing program 3c of a program memory 3 applies the scramble processing to the reproduction program and the literary works data which are stored in a transmission data memory 5 based on a prescribed rule and then unifies them together. On the other hand, a literary work read/reproduction device 10 cancels the scramble of the received unified reproduction program and literary work data and stores them in reproduction processing program area 12e and a data memory 14 respectively.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision
of rejection]

[Date of requesting appeal against examiner's
